

# JEPPIAAR ENGINEERING COLLEGE

## **DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING**

# **CS6702 GRAPH THEORY AND APPLICATIONS**

# **QUESTION BANK**

# IV YEAR A & B / BATCH: 2015 -19

**Vision of Institution:** To build Jeppiaar Engineering College as an Institution of Academic Excellence in Technical education and Management education and to become a World Class University.

## **Mission of Institution**

| M1 | To excel in teaching and <b>learning</b> , research and innovation by promoting the principles of scientific analysis and creative thinking   |
|----|---|
| M2 | To participate in the production, <b>development and dissemination of knowledge</b> and interact with <b>national and international communities</b>   |
| M3 | To equip students with values, ethics and life skills needed to enrich their lives and<br>enable them to meaningfully contribute to the progress of society   |
| M4 | To prepare students for higher studies and lifelong learning, enrich them with the practical and entrepreneurial skills necessary to excel as future professionals and contribute to Nation's economy |

**Vision of Department:** To emerge as a globally prominent department, developing ethical computer professionals, innovators and entrepreneurs with academic excellence through quality education and research.

### **Mission of Department**

| M1 | To create <b>computer professionals</b> with an ability to identify and <b>formulate the engineering problems</b> and also to provide <b>innovative solutions</b> through <b>effective teaching learning process.</b> |
|----|---|
| M2 | To <b>strengthen the core-competence</b> in computer science and engineering and to create an ability to <b>interact</b> effectively with industries.   |
| M3 | To produce engineers with good professional skills, ethical values and life skills for the betterment of the society.   |
| M4 | To encourage students towards <b>continuous and higher level learning</b> on technological advancements and provide a platform for <b>employment and self-employment</b> .  |

## PROGRAM OUTCOMES (POs)

| PO1  | <b>Engineering Knowledge:</b> Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of computer science engineering problems.   |
|------|--|
| PO2  | <b>Problem analysis:</b> Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.   |
| PO3  | <b>Design/development of solutions:</b> Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.         |
| PO4  | <b>Conduct investigations of complex problems:</b> Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.  |
| PO5  | <b>Modern tool usage:</b> Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.   |
| PO6  | <b>The engineer and society:</b> Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.   |
| PO7  | <b>Environment and sustainability:</b> Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.   |
| PO8  | <b>Ethics:</b> Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.  |
| PO9  | <b>Individual and team work:</b> Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.   |
| PO10 | <b>Communication:</b> Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO11 | <b>Project management and finance:</b> Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.   |
| PO12 | <b>Life-long learning:</b> Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.   |

## **PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)**

**PEO 01:** To address the real time complex engineering problems using innovative approach with strong core computing skills.

**PEO 02:** To apply core-analytical knowledge and appropriate techniques and provide solutions to real time challenges of national and global society.

**PEO 03:** Apply ethical knowledge for professional excellence and leadership for the betterment of the society.

PEO 04: Develop life-long learning skills needed for better employment and entrepreneurship.

## **PROGRAMME SPECIFIC OUTCOME (PSOs)**

**PSO1** – An ability to understand the core concepts of computer science and engineering and to enrich problem solving skills to analyze, design and implement software and hardware based systems of varying complexity.

**PSO2** - To interpret real-time problems with analytical skills and to arrive at cost effective and optimal solution using advanced tools and techniques.

**PSO3** - An understanding of social awareness and professional ethics with practical proficiency in the broad area of programming concepts by lifelong learning to inculcate employment and entrepreneurship skills.

**BLOOM TAXANOMY LEVEL (BTL)** 

BTL6: Creating BTL 5: Evaluating BTL 4: Analyzing BTL 3: Applying BTL 2: Understanding BTL 1: Remembering

## **CS6702 – Graph Theory and Applications**

#### UNIT I

#### **INTRODUCTION**

Graphs – Introduction – Isomorphism – Sub graphs – Walks, Paths, Circuits – Connectedness – Components – Euler graphs – Hamiltonian paths and circuits – Trees – Properties of trees – Distance and centers in tree – Rooted and binary trees.

#### UNIT II

#### TREES, CONNECTIVITY & PLANARITY

Spanning trees – Fundamental circuits – Spanning trees in a weighted graph – cut sets – Properties of cut set – All cut sets – Fundamental circuits and cut sets – Connectivity and separability – Network flows – 1-Isomorphism – 2-Isomorphism – Combinational and geometric graphs – Planer graphs – Different representation of a planer graph.

#### UNIT III

#### MATRICES, COLOURING AND DIRECTED GRAPH

Chromatic number – Chromatic partitioning – Chromatic polynomial – Matching – Covering – Four color problem – Directed graphs – Types of directed graphs – Digraphs and binary relations – Directed paths and connectedness – Euler graphs

#### UNIT IV

#### **PERMUTATIONS & COMBINATIONS :**

Fundamental principles of counting - Permutations and combinations - Binomial theorem - combinations with repetition - Combinatorial numbers - Principle of inclusion and exclusion - Derangements - Arrangements with forbidden Positions.

#### UNIT V

#### **GENERATING FUNCTIONS**:

Generating functions - Partitions of integers - Exponential generating function – Summation operator - Recurrence relations - First order and second order – Non-homogeneous recurrence relations - Method of generating functions.

#### **TEXT BOOKS:**

1. Narsingh Deo, "Graph Theory: With Application to Engineering and Computer Science", Prentice Hall of India, 2003.

2. Grimaldi R.P. "Discrete and Combinatorial Mathematics: An Applied Introduction", Addison Wesley, 1994.

#### **REFERENCES:**

Clark J. and Holton D.A, "A First Look at Graph Theory", Allied Publishers, 1995.
 Mott J.L., Kandel A. and Baker T.P. "Discrete Mathematics for Computer Scientists and

Mathematicians", Prentice Hall of India, 1996.

4. Rosen K.H., "Discrete Mathematics and Its Applications", Mc Graw Hill, 2007.

## **COURSE OUTCOME**

| C402.1 | Recommend precise and accurate mathematical definitions and proofs of graph.  |
|--------|---|
| C402.2 | <b>Recommend</b> precise and accurate mathematical definitions and proofs of tree and graph applications.                                       |
| C402.3 | <b>Choose</b> combination of theoretical knowledge and independent mathematical thinking in creative investigation of questions in graph theory |
| C402.4 | Interpret and make use of the concepts of counting Principles   |
| C402.5 | Interpret and make use of the concepts of recurrence relations and Generating Functions   |

## INDEX

## UNIT I

## **INTRODUCTION**

Graphs – Introduction – Isomorphism – Sub graphs – Walks, Paths, Circuits – Connectedness – Components – Euler graphs – Hamiltonian paths and circuits – Trees – Properties of trees – Distance and centers in tree – Rooted and binary trees.

| S.<br>No | Question   | Course<br>Outcom<br>e | Blooms<br>Taxonom<br>y Level |
|----------|--|-----------------------|------------------------------|
| 1        | <b>1.Define a Graph</b> .<br>A graph is a ordered pair G=(V,E) where, V={v1,v2,v3vn} is the vertex set whose elements are the vertices or nodes of the graph, denoted by V(G) or just V. E= ={e1,e2,e3en} is the edge set whose elements are the edges or connections between vertices of the graph, denoted by E(G) or E. | C402.1                | BTL 1                        |
|          | 2.List three situations where a graph could prove useful.  |                       |                              |
| 2        | a) to represent air routes travelled among a certain set of cities by a particular airline.  | C402.1                | BTL 1                        |
|          | b) to represent an electrical network  |                       |                              |
|          | c) to represent a set of job applicants and a set of open positions in a corporation.  |                       |                              |
|          | 3.Define Walk with respect to graph.NOV/DEC 2016,APR/MAY2018   |                       |                              |
| 3        | Let x, y be the vertices in an undirected graph G=(V,E).<br>Walk : An x-y walk is a alternating sequence<br>x=x0,e1,x1,e2en-1,xn-1,en,xn=y of vertices and edges from G, starting at<br>vertex x and ending at vertex y and involving n edges ei={xi-  | C402.1                | BTL 1                        |
|          | 1,xi}, $1 \le i \le n$ . The length of a walk is its number of edges.  |                       |                              |
| 4        | <b>4.Define Path with respect to graph NOV/DEC 2016, APR/MAY2018</b><br>Path : If no vertex of the x-y walk occurs more than once, then the walk is called a x-y path.   | C402.1                | BTL 1                        |

| _  | 5.Define Trail.  |        |       |
|----|--|--------|-------|
| 5  |  |        |       |
|    | Trail : If no edge in the x-y walk is repeated, then the walk is called a x-y trail.<br><b>Define Circuit. NOV/DEC 2016</b>  | C402.1 | BTL 1 |
| 6  |  |        |       |
|    | Circuit : A closed x-x trail is called a circuit   | C402.1 | BTL 1 |
|    | Define degree(valency) of a vertex.  |        |       |
| 7  | The number of edges incident on a vertex vi, with self loops counted twice is called the degree, deg(vi), of vertex vi.  | C402.1 | BTL 1 |
|    | When two edges and vertices are said to two be adjacent?   |        |       |
| 8  | Two edges are said to be adjacent if they are incident on a common vertex.<br>Two vertices are said to be adjacent if they are the end vertices of the same edge.  | C402.1 | BTL 1 |
|    | Define isolated vertex, pendant vertex and a null graph.   |        |       |
| 9  | • Isolated Vertex-a vertex having no incident vertex is called as isolated vertex ,i.e vertices with degree zero.  | C402.1 | BTL 1 |
|    | • Pendant Vertex-a vertex of degree one is called as pendant vertex.   |        |       |
|    | • Null graph-a graph with no edges is called as null graph.  |        |       |
| 10 | When do we say that two graphs are isomorphic? Give an example.  |        |       |
|    | Two graphs G and G' are said to be isomorphic (to each other) if there is one-to-<br>one correspondence between their vertices and between their edges such that the<br>incidence relationship is preserved. | C402.1 | BTL 1 |
|    | What is a subgraph?  |        |       |
| 11 | If G=(V,E) is a graph(directed or undirected), then G`1=(V1,E1) is called a subgraph of G if $\Phi \neq V1$ and E1, where each edge in E1 is incident with vertices in V1.                                   | C402.1 | BTL 1 |
|    | State the necessary conditions to show that two graphs are isomorphic.   |        |       |
|    |  |        |       |
|    | The two graphs must have-same number of vertices   | C402.1 | BTL 1 |
| 12 | a) same number of edges  |        |       |
|    | b) an equal number of vertices with a given degree   |        |       |
|    |  |        |       |

|    | Is it possible to have a 4-regular graph with 10 edges?  |        |       |
|----|--|--------|-------|
| 13 | We have $4 V  = 20 v = 5$ Thus, we have five vertices of degree 4  | C402.1 | BTL 1 |
| 14 | What is Konigsberg bridge problem?<br>The city of Königsberg in Prussia was set on both sides of the Pregel River, and included two large islands which were connected to each other and the mainland by seven bridges. The problem was to devise a walk through the city that would cross each bridge once and only once.   | C402.1 | BTL 1 |
| 15 | What are Euler trail and Euler circuit?<br>Let G=(V,E) be an undirected graph or multigraph with no isolated vertices.<br>Then G is said to have an Euler circuit if there is a circuit in G that traverses every edge<br>of the graph exactly once. If there is an open trail from a to b in G and this trail<br>traverses each edge in G exactly once, the trail is called as Euler trail. | C402.1 | BTL 1 |
| 16 | <ul> <li>What are the necessary and sufficient conditions to determine whether a given graph has an Euler circuit and Euler trail?</li> <li>a) a given graph G will contain an Euler circuit if and only if all the vertices of G are of even degree.</li> <li>b) a given graph G will contain an Euler trail if and only if it contains atmost two vertices of odd degree.</li> </ul>       | C402.1 | BTL 1 |

|    | What is an Hamilton circuit?  |        |       |
|----|---|--------|-------|
| 17 | If G=(V,E) is a graph or multigraph with $ V  \ge 3$ , we say that G has a Hamiltonian circuit<br>if there is a circuit in G that contains every vertex in V i.e a closed walk that traverses<br>every vertex of G exactly once, except the starting vertex, at which the walk terminates.<br>The figure shows an example. A given graph may have more than one Hamiltonian<br>circuit  | C402.1 | BTL 1 |
|    | What is a clique? State the properties of its vertices and edges.   |        |       |
| 18 | A simple graph in which there exists an edge between every pair of vertices is called as clique. It is also referred as complete graph or Universal graph. The degree of every vertex in a complete graph G of n vertices is $(n-1)$ . The total number of edges in G is $n(n-1)/2$ .   | C402.1 | BTL 1 |
|    | Does a Hamilton circuit exist on the graph below?   |        |       |
|    |   | C402.1 | BTL 1 |
| 19 | v   |        |       |
|    | Looking at the graph, if we start at vertex V, there is no way to visit each vertex exactly once and return back to V because there is only a single edge to V.   |        |       |
|    | Prove that the sum of the degrees of the vertices of any finite graph is even.  |        |       |
| 20 | Each edge ends at two vertices. If we begin with just the vertices and no edges,<br>every vertex has degree zero, so the sum of those degrees is zero, an even number. Now<br>add edges one at a time, each of which connects one vertex to another, or connects a<br>vertex to itself. Either the degree of two vertices is increased by one (for a total of two)<br>or one vertex's degree is increased by two. In either case, the sum of the degrees is<br>increased by two, so the sum remains even. | C402.1 | BTL 1 |
|    | Prove that a complete graph with n vertices contains $n(n-1)/2$ edges.  |        |       |
| 21 | This is easy to prove by induction. If $n = 1$ , zero edges are required, and $1(1-0)/2 = 0$ . Assume that a complete graph with k vertices has $k(k-1)/2$ . When we add the $(k + 1)$ st vertex, we need to connect it to the k original vertices, requiring k additional edges. We will then have $-k(k-1)/2 + k = (k + 1)((k + 1)-1)/2$ vertices. Hence the  | C402.1 | BTL 1 |

|    | proof   |        |       |
|----|---|--------|-------|
|    | proof.  |        |       |
|    |   |        |       |
|    | Find the eccentricity of all the vertices in the given graph.   | C402.1 | BTL 1 |
| 22 | e c d   | 0402.1 |       |
|    | E(a)=E(e)=3; E(b)=E(c)=E(d)=2   |        |       |
|    | What is path length of a tree?  |        |       |
| 23 | The path length of a tree is the sum of the path lengths from the root to all the pendant vertices.   | C402.1 | BTL 1 |
|    | Define Binary tree.   |        |       |
| 24 | A binary tree is defined as a tree in which there is exactly one vertex of degree two, and each of the remaining vertices is of degree one or three   | C402.1 | BTL 1 |
|    | State the properties of binary tree. APR/MAY2018  |        |       |
|    | . The two properties of the binary tree are-  | C402.1 | BTL 1 |
| 25 | a) The number of vertices n in a binary tree is always odd. This is because there is exactly one vertex of even degree, and the remaining n-1 vertices are of odd degrees.                  |        |       |
|    | b) Let p be the number of pendant vertices in a binary tree T. Then n-p-1 is the number of vertices of degree three. Therefore, the number of edges in T equals n-1 and hence $p=(n+1)/2$ . |        |       |
| 26 | Define pendant vertex   |        |       |
| 26 | <ul> <li>Pendant Vertex-a vertex of degree one is called as pendant vertex.</li> </ul>  | C402.4 |       |
|    | Define null graph.  | C402.1 | BTL 1 |
| 27 | • Null graph-a graph with no edges is called as null graph.   | C402.1 | BTL 1 |
|    |   |        |       |

| 28 | What is loop?  |                     |       |
|----|--|---------------------|-------|
|    | A loop is an edge whose vertices are equal   | C402.1              | BTL 1 |
| 29 | What is parallel edges?<br>The edges having the same pair of vertices.   | C402.1              | BTL 1 |
| 30 | What is meant by adjacent edges?<br>If two distinct edges are incident with a common vertex then they are called adjacent edges.   | C402.1              | BTL 1 |
| 31 | What is meant by eccentricity? NOV/DEC 2016<br>The eccentricity $\epsilon(v)$ of a graph vertex $v$ in a connected graph $G$ is the maximum graph<br>distance between $v$ and any other vertex $u$ of $G$ . For a disconnected graph, all vertices are defined<br>to have infinite eccentricity  | C402.1              | BTL 4 |
| 32 | NOV/DEC 2017<br>Determine the number of vertices for a graph G, which has 15 edges and each<br>vertex has degree 6. Is the graph G be a simple graph ?   | C402.1              | BTL 2 |
| 33 | NOV/DEC 2017<br>Suppose G is a finite cycle-free connected graph with at least one edge. Show that<br>has at least two vertices of degree 1.   | G <sub>C402.1</sub> | BTL 5 |
| 34 | 1. Define Euler graph. Show that an Euler graph is connected except for any isolated vertices the graph may have. A graph which contains an Eulerian circuit is called an Euler (Eulerian) graph. i.e., A circuit visits every edge exactly once which starts and ends on the same vertex. Since isolated vertices are present in Euler graph and every vertices must be even. i.e., every vertex is connected in an Euler graph. So an Euler graph is connected except for any isolated vertices. | C402.1              | BTL 5 |
|    | APR/MAY2017  |                     |       |

| 35 | 2. Can there be a path longer than a Hamiltonian path (if any) in a simple, connected, undirected graph? Why?<br>No. There is no path longer than a Hamiltonian path.<br>Hamiltonian path in a simple, connected, undirected graph is the longest path as it includes all the vertices. APR/MAY2017 | C402.1     | L BTL 5 |

## **UNIT II**

## TREES, CONNECTIVITY & PLANARITY

Spanning trees – Fundamental circuits – Spanning trees in a weighted graph – cut sets – Properties of cut set – All cut sets – Fundamental circuits and cut sets – Connectivity and separability – Network flows – 1-Isomorphism – 2-Isomorphism – Combinational and geometric graphs – Planer graphs – Different representation of a planer graph.

#### PART-A

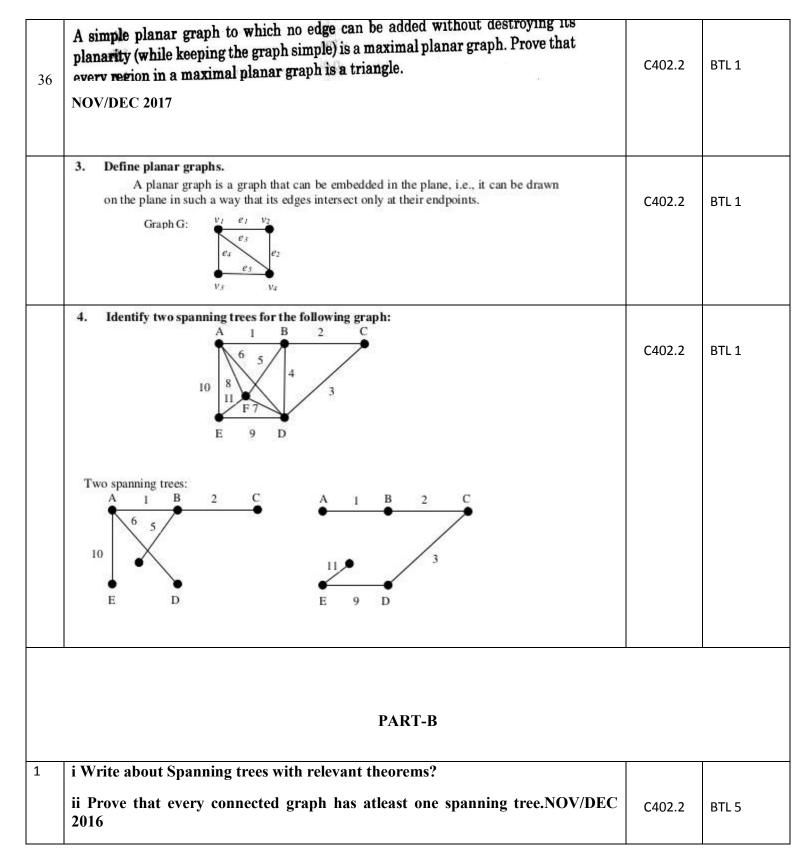

| S.<br>No. | Question  | Course<br>Outcome | Blooms<br>Taxonomy<br>Level |
|-----------|---|-------------------|-----------------------------|
| 1         | <b>Define Minimum Spanning Tree:</b><br>In a weighted graph, a minimum spanning tree is a spanning tree that has minimum weight that all other spanning trees of the same graph. In real world situations, this weight can be measured as distance, congestion, traffic load or any arbitrary value denoted to the edges. | C402.2            | BTL 1                       |
| 2         | <b>Define Spanning Tree:</b><br>A spanning tree is a subset of Graph G, which has all the vertices covered with minimum possible number of edges. Hence, a spanning tree does not have cycles and it can not be disconnected.   | C402.2            | BTL 1                       |
| 3         | <b>Define the Term Rank .</b><br>Rank refers to the number of branches in any spanning tree G.r=n-k   | C402.2            | BTL 1                       |
| 4         | <b>Define the Term Nullity.</b><br>Nullity refers to the number of Chords in G.   | C402.2            | BTL 1                       |
| 5         | What is a fundamental circuit?<br>A circuit formed by adding a chord to a spanning tree T, is called a fundamental circuit.   | C402.2            | BTL 1                       |
| 6         | <ul> <li>Define a cut set.</li> <li>A cut set of a connected graph G is a set S of edges with the following properties:</li> <li>* The removal of all edges in S disconnects G.</li> <li>* The removal of some (but not all) of edges in S does not disconnects G.</li> </ul>   | C402.2            | BTL 1                       |

|    | For the following graph given below draw the adjacency matrix  |        |       |
|----|--|--------|-------|
| 7  | $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$   | C402.2 | BTL 1 |
|    | When a graph is said to be bipartite graph?  |        |       |
| 8  | • If there exists a way to partition the set of vertices V, in the graph into two sets V1 and V2.where V1 $\Box$ V2 = V and V1 $\Box$ V2 = $\Box$ , such that each edge in E contains one vertex from V1 and the other vertex from V2.   | C402.2 | BTL 1 |
|    | What is a Vertex connectivity?   |        |       |
| 9  | The connectivity (or vertex connectivity) $K(G)$ of a connected graph G (other than a complete graph) is the minimum number of vertices whose removal disconnects G. When $K(G) \ge k$ , the graph is said to be k-connected (or k-vertex connected). When a vertex is removed, all the edges incident to it are also removed.                                       | C402.2 | BTL 1 |
| 10 | Define a bridge.   |        |       |
|    | A bridge is a single edge whose removal disconnects a graph  | C402.2 | BTL 1 |
|    | Define articulation point  |        |       |
| 11 | A vertex in an undirected connected graph is an articulation point (or cut vertex) iff removing it (and edges through it) disconnects the graph. Articulation points represent vulnerabilities in a connected network – single points whose failure would split the network into 2 or more disconnected components. They are useful for designing reliable networks. | C402.2 | BTL 1 |
| 12 | What is a block?   |        |       |
|    |  |        |       |

|    | A separable graph consists of two or more non separable sub graphs. Each of the largest non-separable sub graphs is called a block.   | C402.2 | BTL 1 |
|----|---|--------|-------|
| 13 | <b>Define radius and diameter.</b><br>The eccentricity of a centre in a tree is defined as the radius of the tree. The diameter of the tree T, on the other hand is defined as the length of the longest path T.            | C402.2 | BTL 1 |
| 14 | <b>Define Binary tree.</b><br>A binary tree is defined as the tree in which there is exactly one vertex of degree two, and each of the remaining vertices is of degree one or three.  | C402.2 | BTL 1 |
| 15 | <b>Define Pendant Vertex</b> .<br>A leaf vertex (also pendant vertex) is a vertex with degree one.  | C402.2 | BTL 1 |
| 16 | <b>Define Kruskal's algorithm:</b><br>Start with no nodes or edges in the spanning tree, and repeatedly add the cheapest edge that does not create a cycle.   | C402.2 | BTL 1 |
| 17 | <b>Define Prim's algorithm</b> :<br>Start with any one node in the spanning tree, and repeatedly add the cheapest edge, and the node it leads to, for which the node is not already in the spanning tree                    | C402.2 | BTL 1 |
| 18 | <b>Define weighted graph.</b><br>A weighted graph is a graph for which each edge has an associated real number, called the weight of the edge. The sum of the weights of all of the edges is the total weight of the graph. | C402.2 | BTL 1 |
| 19 | <b>Define network flow.</b><br>A network flow graph G=(V,E) is a directed graph with two special vertices: the source vertex s, and the sink (destination) vertex t.  | C402.2 | BTL 1 |
| 20 | What is Branch?<br>An edge in a spanning tree T is called a Branch of T.  | C402.2 | BTL 1 |

|    | What is Chord?   |         |       |
|----|--|---------|-------|
| 21 | An edge of G that is not in a given spanning tree T is called a Chord.   | C402.2  | BTL 1 |
|    | What is elementary tree transformation?  |         |       |
| 22 | The generation of one spanning tree to another through addition of a chord and deletion of an appropriate branch is called a cyclic interchange or element tree transformation | C402.2  | BTL 1 |
|    | What is meant by fundamental cut-set?  |         |       |
| 23 | A cut set S containing exactly one branch of a T tree is called fundamental cut-set with respect to T.   | C402.2  | BTL 1 |
|    | Write the properties of a cut set.   |         |       |
| 24 | 1.Every cut set in a connected graph G must contain at least one branch of every spanning tree of G.   | C402.2  | BTL 1 |
|    | 2.In a connected graph G,any minimal set of edges containing at least one branch of every spanning tree of G is a cut set.   |         |       |
|    | Write the properties of a cut set.   |         |       |
| 25 | 1.Every cut set in a connected graph G must contain at least one branch of every spanning tree of G.   | C402.2  | BTL 1 |
|    | 2.In a connected graph G,any minimal set of edges containing at least one branch of every spanning tree of G is a cut set.   |         |       |
|    | Define forest.   |         |       |
| 26 | A collection of trees is called a forest.  | C402.2  | BTL 1 |
|    | What is meant by edge connectivity?  |         |       |
| 27 | In a connected graph ,the number of edges in the smallest cut set is defined as the edge connectivity of G   | C402.2  | BTL 1 |
|    | What is meant by separability?   |         |       |
| 28 | A connectivity graph is said to be separable if its vertex connectivity is one.  | C402.2  | BTL 1 |
|    |  | 0.102.2 | 5.21  |

| What is meant by non-senarable granh?  |   |  |
|--|---|--|
| A connectivity graph which is not separable is termed as non-separable graph.  | C402.2  | BTL 1  |
| Define 1-isomorphism. NOV/DEC 2016   |   |  |
| Two graphs G1 and G2 are said to be 1-isomorphic if they become<br>isomorphic to each other when we repeatedly decompose, a cut-vertex into 2 vertices<br>to produce 2 disjoint subgraphs.   | C402.2  | BTL 1  |
| Define 2-isomorphism. NOV/DEC 2016   |   |  |
| Two graphs G1 and G2 are said to be 2-isomorphic if they become isomorphic after under going operation 1 or operation 2 or both any number of times.   | C402.2  | BTL 1  |
| What are the applications of planar graph? NOV/DEC 2016  |   |  |
| We obtain a planar graph from a map by representing countries by vertices, and placing edges between countries that touch each other. Assuming each country is contiguous, this gives a planar graph.  | C402.2  | BTL 1  |
| Define fundamental circuit in a granh APR/MAV2018  |   |  |
| A fundamental cut consists of $E(T) \setminus e$ for a single edge in . That is, removing an edge from is a fundamental cut. The fundamental set of cuts consists of all such fundamental cuts for . Edit: There are vertices in K 3, 3, and so a spanning tree has edges.   | C402.2  | BTL 1  |
| State Kuratowski's theorem APR/MAY2018   |   |  |
| Kuratowski's theorem states that a finite graph G is planar, if it is not possible to subdivide the edges of K5 or K3,3, and then possibly add additional edges and vertices, to form a graph isomorphic to G. Equivalently, a finite graph is planar if and only if it does not contain a subgraph that is homeomorphic to K5 | C402.2  | BTL 1  |
| In a tree every vertex is a cut-vertex. Justify the claim.   |   |  |
| In a cloc, every vertical to a class   | C402.2  | BTL 1  |
| NOV/DEC 2017   |   |  |
| If is a <b>tree</b> of order at least, then contains a <b>cut vertex</b> such that <b>every vertex</b> adjacent to, with at most one exception is an end <b>vertex</b> . I know that if is a connected graph of order or more and it contains a bridge, then has a <b>cut vertex</b> .   |   |  |
|  | graph. Define 1-isomorphism. NOV/DEC 2016 Two graphs G1 and G2 are said to be 1-isomorphic if they become isomorphic to each other when we repeatedly decompose, a cut-vertex into 2 vertices to produce 2 disjoint subgraphs. Define 2-isomorphism. NOV/DEC 2016 Two graphs G1 and G2 are said to be 2-isomorphic if they become isomorphic after under going operation 1 or operation 2 or both any number of times. What are the applications of planar graph? NOV/DEC 2016 We obtain a planar graph from a map by representing countries by vertices, and placing edges between countries that touch each other. Assuming each country is contiguous, this gives a planar graph. Define fundamental circuit in a graph APR/MAY2018 A fundamental cut consists of E (T) \ e for a single edge in . That is, removing an edge from is a fundamental cut. The fundamental set of cuts consists of all such fundamental cuts for . Edit: There are vertices in K 3 , 3 , and so a spanning tree has edges. State Kuratowski's theorem APR/MAY2018 Kuratowski's theorem APR/MAY2018 In a tree, every vertex is a cut-vertex. Justify the claim. NOV/DEC 2017 If is a tree of order at least , then contains a cut vertex such that every vertex adjacent to , with at most one exception is an end vertex. I know that if is a connected graph of order or | A connectivity graph which is not separable is termed as non-separable graph.       C402.2         Define 1-isomorphism. NOV/DEC 2016       C402.2         Two graphs G1 and G2 are said to be 1-isomorphic if they become isomorphic to each other when we repeatedly decompose, a cut-vertex into 2 vertices to produce 2 disjoint subgraphs.       C402.2         Define 2-isomorphism. NOV/DEC 2016       C402.2         Two graphs G1 and G2 are said to be 2-isomorphic if they become isomorphic after under going operation 1 or operation 2 or both any number of times.       C402.2         What are the applications of planar graph? NOV/DEC 2016       C402.2         We obtain a planar graph from a map by representing countries by vertices, and placing edges between countries that touch each other. Assuming each country is contiguous, this gives a planar graph.       C402.2         Define fundamental circuit in a graph APR/MAY2018       C402.2         A fundamental cut consists of E ( T ) \ e for a single edge in . That is, removing an edge from is a fundamental cut. The fundamental set of cuts consists of all such fundamental cuts for . Edit: There are vertices in K 3 , 3 , and so a spanning tree has edges.       C402.2         State Kuratowski's theorem states that a finite graph G is planar, if it is not possible to subdivide the edges of KS or K3.3, and then possibly add additional edges and vertices, to form a graph isomorphic to G. Equivalently, a finite graph is planar if and only if it does not contain a subgraph that is homeomorphic to KS       C402.2         In a tree, every vertex is a cut-vertex. Justify the claim. | 14 | (2)  | If only one plot was full of water and this had to be drained into all other plots, then how many walls need to be broken?<br>$v_1$<br>$v_6$<br>$v_6$<br>$v_7$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_9$<br>$v_$ |        |       |
| 15 | con  | the Euler's formula relating the number of vertices, edges and faces of a planar<br>nected graph. Give two conditions for testing for planarity of a given graph. Give<br>mple graph that is planar and another that is non-planar.  | C402.2 | BTL 5 |

#### UNIT III

## MATRICES, COLOURING AND DIRECTED GRAPH

Chromatic number – Chromatic partitioning – Chromatic polynomial – Matching – Covering – Four color problem – Directed graphs – Types of directed graphs – Digraphs and binary relations – Directed paths and connectedness – Euler graphs

## PART-A

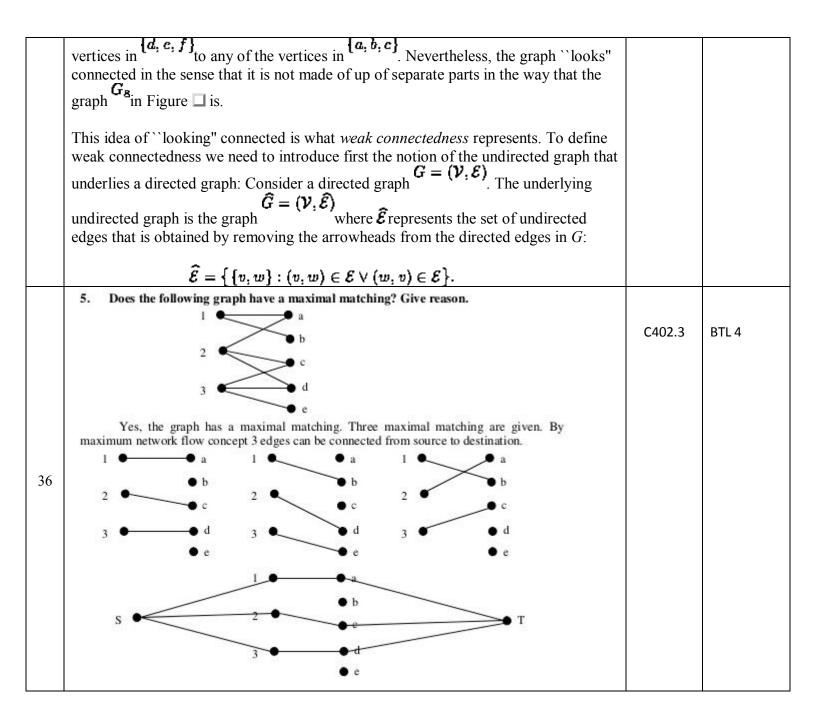

| S.<br>No. | Question   | Course<br>Outcome | Blooms<br>Taxonomy<br>Level |
|-----------|--|-------------------|-----------------------------|
|           | Define Chromatic Number.   |                   |                             |
| 1         | The chromatic number of a graph G is the smallest number of colors needed to color the vertices of so that no two adjacent vertices share the same color.  | C402.3            | BTL 1                       |
| 2         | What is proper coloring?   |                   |                             |
|           | Painting all the vertices of a graph with colors such that no two adjacent vertices have the same color is called proper coloring.   | C402.3            | BTL 1                       |
| 2         | What is coloring problem?  |                   |                             |
| 3         | Proper coloring of a graph with minimal number of color is called coloring problem   | C402.3            | BTL 1                       |
|           | What is chromatic polynomial?  |                   |                             |
| 4         | A properly colored graph G with n-vertices (many ways) and using large number of colors expressed by means of a polynomial, such a polynomial is called chromatic polynomial.  | C402.3            | BTL 1                       |
|           | Write about maximal independent sets?NOV/DEC 2016  |                   |                             |
| 5         | A maximal independent set is an set to which no other vertex can be added with out destroying its independence property.   | C402.3            | BTL 1                       |
|           | Define chromatic partitioning.   |                   |                             |
| 6         | A proper coloring of a graph naturally induces a partitioning of the vertices into different subsets   | C402.3            | BTL 1                       |
|           | What is four color conjecture?   |                   |                             |
| 7         | Any map(planar graph) can be properly colored with four colors.  | C402.3            | BTL 1                       |
|           | What is dominating sets?   |                   |                             |
| 8         | A dominating set (or externally stable set) in a graph G is a set of vertices that dominates every vertex v in G in the following sense. Either v is included in the dominating set or is adjacent to one or more vertices included in the dominating set. | C402.3            | BTL 1                       |
|           |  |                   |                             |

|    | Write about minimal dominating sets?NOV/DEC 2016   |        |       |
|----|--|--------|-------|
| 9  | Write about minimal dominating sets?NOV/DEC 2016<br>A minimal dominating set is a dominating set from which no vertex can be removed<br>without destroying its dominance property. | C402.3 | BTL 1 |
| 10 | Define Isomorphic digraphs:  |        |       |
|    | Two digraphs are said to be isomorphic if their underlying graphs are isomorphic and<br>the direction of the corresponding arcs are same   | C402.3 | BTL 1 |
|    | What is a maximal matching?  |        |       |
|    | A maximal matching is a matching to which no edge in the graph can be added.   | C402.3 | BTL 1 |
| 11 | Example: in a complete graph of three vertices (triangle) any single edge is a maximal matching.   |        |       |
|    | What is an edge covering?  |        |       |
| 12 | A set of edges that covers a graph G is said to be an edge covering, a covering sub graph or simply a covering of G.   | C402.3 | BTL 1 |
|    | What is Equivalence Relation.  |        |       |
| 13 | A binary relation is said to be an equivalence relation if it is reflexive symmetric and transitive.   | C402.3 | BTL 1 |
|    | Examples : "is parallel to", " is equal to", " is isomorphic to".  |        |       |
|    | Define digraph   |        |       |
| 14 | A directed graph (or digraph) is a pair (V,E), where V is a non empty set and E is a set of ordered pairs of elements taken from the set V.  | C402.3 | BTL 1 |
|    | What is simple graph.  |        |       |
| 15 | A digraph that has no self-loop or parallel edges is called a simple digraph.  | C402.3 | BTL 1 |
|    | Name the types of Simple Digraphs:   |        |       |
| 16 | Asymmetric Digraphs:   | C402.3 | BTL 1 |
| 10 | Symmetric Digraphs   |        |       |
|    |  |        |       |

| What is meant by Asymmetric Digraphs  |  |   |
|---|--|---|
| Asymmetric Digraphs:  | C402.3   | BTL 1   |
| Digraphs that have at most one directed edge between a pair of vertices, but are  |  |   |
| anowed to have self-loops, are called asymmetric  |  |   |
| What is meant by symmetric Digraphs   |  |   |
| Symmetric Digraphs:   | C402.3   | BTL 1   |
| Digraphs in which for every edge (a, b) (i.e., from vertex a to b) there is also an edge  | 0102.3   | DILI  |
|   |  |   |
| What is complete digraphs.  |  |   |
| A complete undirected graph was defined as a simple graph in which every vertex is is is independent to every other vertex events by one edge.  | C402.3   | BTL 1   |
| Joined to every other vertex exactly by one edge.   |  |   |
| Write the two types of complete graphs  |  |   |
| For digraphs we have two types of complete graphs.  | C402.3   | BTL 1   |
| A complete symmetric digraph is a simple digraph in which there is exactly one edge directed from every vertex to every other vertex, and a complete asymmetric digraph is an asymmetric digraph in which there is exactly one edge between every pair of |  |   |
| vertices.   |  |   |
| A complete asymmetric digraph of n vertices contains $n(n - 1)/2$ edges, but a complete symmetric digraph of n vertices contains $n(n - 1)$ edges. A complete asymmetric digraph is also called a tournament or a complete tournament.                    |  |   |
| Define a Euler Graph.   |  |   |
| A closed walk in a graph G containing all the edges of G is called an Euler line in G. A graph containing an Euler line is called an Euler graph.   | C402.3   | BTL 1   |
|   |  |   |
| Prove: A connected graph G is an Euler graph if and only if all vertices of G are of even degree.   |  |   |
| Proof : Necessity Let $G(V, E)$ be an Euler graph.  | C402.3   | BTL 1   |
| Thus G contains an Euler line Z, which is a closed walk. Let this walk start and end<br>at the vertex $u \in V$ . Since each visit of Z to an intermediate vertex $v$ of Z contributes  |  |   |
| at the vertex $u \in V$ . Since each visit of Z to an intermediate vertex V of Z contributes<br>two to the degree of v and since Z traverses each edge exactly once, $d(v)$ is even for   |  |   |
|   | Digraphs that have at most one directed edge between a pair of vertices, but are allowed to have self-loops, are called asymmetric  What is meant by symmetric Digraphs Symmetric Digraphs: Digraphs in which for every edge (a, b) (i.e., from vertex a to b) there is also an edge (b, a).  What is complete digraphs. A complete undirected graph was defined as a simple graph in which every vertex is joined to every other vertex exactly by one edge.  Write the two types of complete graphs For digraphs we have two types of complete graphs. A complete symmetric digraph is a simple digraph in which there is exactly one edge directed from every vertex to every other vertex, and a complete asymmetric digraph is an asymmetric digraph in which there is exactly one edge directed from every vertex to every other vertex, and a complete asymmetric digraph is an asymmetric digraph of n vertices contains n(n - 1)/2 edges, but a complete symmetric digraph of n vertices contains n(n - 1) edges. A complete asymmetric digraph is also called a tournament or a complete tournament.  Define a Euler Graph. A closed walk in a graph G containing all the edges of G is called an Euler line in G. A graph containing an Euler line is called an Euler graph.  Prove: A connected graph G is an Euler graph if and only if all vertices of G are of even degree.  Proof : Necessity Let G(V, E) be an Euler graph.  Thus G contains an Euler line Z, which is a closed walk. Let this walk start and end at the vertex u ∈ V. Since each visit of Z to an intermediate vertex v of Z contributes | Asymmetric Digraphs:C402.3Digraphs that have at most one directed edge between a pair of vertices, but are<br>allowed to have self-loops, are called asymmetricC402.3What is meant by symmetric DigraphsSymmetric Digraphs:C402.3Digraphs in which for every edge (a, b) (i.e., from vertex a to b) there is also an edge<br>(b, a).C402.3What is complete digraphs.C402.3A complete undirected graph was defined as a simple graph in which every vertex is<br>joined to every other vertex exactly by one edge.C402.3Write the two types of complete graphs.C402.3A complete symmetric digraph is a simple digraph in which there is exactly one edge<br>directed from every vertex to every other vertex, and a complete asymmetric digraph<br>is an asymmetric digraph of n vertices contains n(n - 1)/2 edges, but a<br>complete asymmetric digraph of n vertices contains n(n - 1)/2 edges, but a<br> |

|    | every such vertex.   |        |       |
|----|--|--------|-------|
|    | Each intermediate visit to u contributes two to the degree of u, and also the initial and final edges of Z contribute one each to the degree of u. So the degree $d(u)$ of u is also even. |        |       |
|    | Define Arborescence  |        |       |
|    | A digraph G is said to be an arborescence if,  | C402.3 | BTL 1 |
| 23 | i) G contains no circuit – neither directed nor semi circuit.  |        |       |
|    | ii) In G there is precisely one vertex v of zero – in degree.  |        |       |
|    | What is strongly connected digraphs.   |        |       |
| 24 | A digraph G is said to be strongly connected if there is at least one directed path from every vertex to every other vertex.   | C402.3 | BTL 1 |
|    | What is weakly connected digraphs.   |        |       |
| 25 | A digraph G is said to be weakly connected if its corresponding undirected graph is connected but G is not strongly connected  | C402.3 | BTL 1 |
|    | What is meant by k-chromatic graph?  |        |       |
| 26 | A graph that requires k different colors for its proper coloring and no less is called k-chromatic graph.  | C402.3 | BTL 1 |
|    | When a graph is said to be 2-chromatic?  |        |       |
| 27 | A graph is 2-chromatic if and only if it is bipartite.   | C402.3 | BTL 1 |
|    | What is independent set?   |        |       |
| 28 | A set of vertices in a graph is said to be an independent set of vertices of no two vertices in the set are adjacent.  | C402.3 | BTL 1 |
|    | What is independent number?  |        |       |
| 29 | The number of vertices in the largest independent set of a graph G is called the independent number.   | C402.3 | BTL 1 |
|    |  |        |       |

|    | Define chromatic polynomial .   |        |       |
|----|---|--------|-------|
| 30 | A polynomial which gives the number of different ways the graph G can be<br>properly colored using the minimum number of colors   | C402.3 | BTL 1 |
| 31 | Find the chromatic number of a complete graph of n vertices? NOV/DEC 2016<br>K (k-1) <sup>n-1</sup>   | C402.3 | BTL 1 |
| 32 | Let graph G is 2 –chromatic, then prove that it is bipartitle. <b>APR/MAY2018</b>   |        |       |
|    |   | C402.3 | BTL 1 |
| 33 | Define minimal covering. <b>APR/MAY2018</b><br>Definition. Formally, an edge cover of a graph G is a set of edges C such that each vertex in G is incident with at least one edge in C. The set C is said to cover the vertices of G The edge covering number is the size of a minimum edge covering. | C402.3 | BTL 1 |
| 34 | Prove that a graph of n vertices is a complete graph iff its chromatic polynomial is $Pn(\lambda) = \lambda(\lambda - 1) (\lambda - 2) \dots (\lambda - n + 1)$ .   | C402.3 | BTL 2 |
|    | NOV/DEC 2017  |        |       |
|    | Define the two types of connectedness in digraphs. Give examples.   |        |       |
|    | NOV/DEC 2017  | C402.3 | BTL 4 |
|    | wo kinds of connectedness, <i>strong</i> and <i>weak</i> . Strong connectedness of a directed graph is defined as follows:  |        |       |
| 35 | <b>Definition (Strong Connectedness of a Directed Graph)</b> A directed graph $G = (\mathcal{V}, \mathcal{E})_{\text{is strongly connected}}$ if there is a path in G between every pair of vertices in $\mathcal{V}$ .   |        |       |
|    | For example, Figure $\Box$ shows the directed graph $G_9 = \{\mathcal{V}, \mathcal{E}\}_{given by}$   |        |       |
|    | $ \begin{array}{lll} \mathcal{V} &=& \{a,b,c,d,c,f\} \\ \mathcal{E} &=& \{(a,b),(b,c),(b,c),(c,a),(d,c),(c,f),(f,d),\} \end{array} $  |        |       |
|    |   |        |       |

#### UNIT IV

#### **PERMUTATIONS & COMBINATIONS :**

Fundamental principles of counting - Permutations and combinations - Binomial theorem - combinations with repetition - Combinatorial numbers - Principle of inclusion and exclusion - Derangements - Arrangements with forbidden Positions.

#### PART-A

| S.  | Question  | Cours      | Blooms            |
|-----|---|------------|-------------------|
| No. |   | e<br>Outco | Taxonomy<br>Level |
|     | Define Fundamental Counting Principle:  | me         |                   |
|     | The principle for determining the number of ways two or more operations can be performed together.  | C402.4     | BTL 1             |
| 1   | Example: How many ways can six different books be positioned on a book shelf?   |            |                   |
|     | $6! = 6 \times 5 \times 4 \times 3 \times 2 \times 1 = 720$   |            |                   |
|     | Six different books can be positioned 720 ways on a book shelf.   |            |                   |
|     |   |            |                   |
|     | Explain Addition rule or Sum rule.  |            |                   |
| 2   | If one task or operation can be performed in m ways, while a second ask can be performed in n ways and the two tasks cannot be done simultaneously, then either of the tasks can be done in $m + n$ ways. | C402.4     | BTL 1             |
|     | Example: There are 3 lists of computer projects consisting of 23, 15 and 19 possible projects respectively. No project is found in more than one list. How many possible projects can a student choose?   |            |                   |
|     | Solution: Total number of projects is $23+15+19 = 57$ . Since no project is found in more than one list, the number of ways a project can be chosen is 57 ways.   |            |                   |
|     | Explain Multiplication rule or Product rule.  |            |                   |
| 3   | Suppose a certain task or operation can be done in m ways and another task independent of the former can be done in n ways. Then both of them can be done in  | C402.4     | BTL 1             |

| Example: There are two different collections of books consisting of 6       Mathematics books and 4         Computer Science books: In how many ways can a student select a Mathematics book and a Computer Science book?       Solution: One Mathematics book can be chosen in 6 ways and one Computer Science book can be chosen in 4 ways.         Image: Total number of ways taking one Mathematics book and one Computer Science book = $(6)(4) = 24$ ways.       Define Permutation.         4       A permutation is an arrangement of a given collection of objects in a definite order taking some of the objects or all the objects.       C402.4         5       How many different bit strings of length 7 are there?       Solution:       C402.4         5       Each of the 7 places can be filled with 0 or 1.       Ethen number of bit strings of length 7 is $27 = 128$ C402.4         6       A Combination.       6       A Combination is a selection of objects from a given collection of objects taken some objects or all the objects at a time. The order of selection is immaterial.       C402.4         7       If A and B are mutually exclusive, then $n(A \square B) = n(A) + n(B)$ or $ A \square B  =  A  +  B $ . If A and B are any two sets, then       C402.4       BTL 1  |   | mn ways.  |        |       |
|--|---|---|--------|-------|
| book and a Computer Science book?       Solution: One Mathematics book can be chosen in 6 ways and one Computer Science book can be       Solution: One Mathematics book can be chosen in 6 ways and one Computer Science book can be         chosen in 4 ways. $\Box$ Total number of ways taking one Mathematics book and one Computer Science book = (6)(4) = 24 ways.       Entities the second   |   | 1   |        |       |
| Science book can be       chosen in 4 ways. $\Box$ Total number of ways taking one Mathematics book and one Computer Science book = (6)(4) = 24 ways. $Define Permutation.        A permutation is an arrangement of a given collection of objects in a definite order taking some of the objects or all the objects.        C402.4       BTL 1           How many different bit strings of length 7 are there?        Solution:        C402.4       BTL 1            Each of the 7 places can be filled with 0 or 1.        □ the number of bit strings of length 7 is        C402.4       BTL 1            Define Combination.                    A Combination is a selection of objects from a given collection of objects taken some objects or all the objects at a time. The order of selection is immaterial.  $   |   |   |        |       |
| $\Box$ Total number of ways taking one Mathematics book and one Computer Science book = (6)(4) = 24 ways. $\Box$ 4       Define Permutation. $A$ permutation is an arrangement of a given collection of objects in a definite order taking some of the objects or all the objects. $C402.4$ $BTL 1$ 4       A permutation is an arrangement of a given collection of objects in a definite order taking some of the objects or all the objects. $C402.4$ $BTL 1$ 5       Solution: $C402.4$ $BTL 1$ 5       Each of the 7 places can be filled with 0 or 1. $\Box$ the number of bit strings of length 7 is $27 = 128$ $C402.4$ $BTL 1$ 6       A Combination.       A Combination is a selection of objects from a given collection of objects taken some objects or all the objects at a time. | $n(A \Box B) = n(A) + n(B) \text{ or }  A \Box B  =  A  +  B .$<br>If A and B are any two sets, then   | 7 | If A and B are mutually exclusive, then                                   |        |       |
|  |   | $n(A \Box B) = n(A) + n(B) \text{ or }  A \Box B  =  A  +  B .$           |        |       |
|  |   | If A and B are any two sets, then   |        |       |
| $n(A \Box B) = n(A) + n(B) - n(A \Box B).$   |   | $n(A \Box B) = n(A) + n(B) - n(A \Box B).$                                |        |       |

|    | If A, B, C are any three sets, then  |        |       |
|----|--|--------|-------|
|    |  |        |       |
|    | $n(A \square B \square C) = n(A) + n(B) + n(C) - n(A \square B) - n(B \square C) - n(C \square A) + n(A \square B \square C).$   |        |       |
|    | It has applications in number theory, onto functions, derangements.  |        |       |
|    | Explain Pigeon Hole Principle.   |        |       |
| 8  | If m pigeons are assigned to n pigeonholes (m>n), then at least one pigeonhole has two or more pigeons.  | C402.4 | BTL 1 |
| 9  | A salesman at a computer store would like to display 5 models of personal computers, 4 models of computer monitors and 3 models of keyboards. In how many ways can he arrange them in a row if the items of the same kind are together?          | C402.4 | BTL 1 |
| 7  | Solution:  |        |       |
|    | The total number of arrangements   |        |       |
|    | $= 3! \times 5! \times 4! \times 3! = 103,680$ .   |        |       |
|    | From a college if we select 367 students, how many students have the same  |        |       |
| 10 | birthday?  | C402.4 | BTL 1 |
|    | Solution: There are 367 students and the maximum number of days in a year is 366 (leap year) and so 366 possible birthdays are there. Treating the 367 students as pigeons and the 366 birthdays as pigeonholes, by Pigeonhole principle atleast | 0402.4 |       |
|    | two students will have the same birthday.  |        |       |
|    | How many different 7 digit phone numbers are possible if the 1st digit cannot be a 0 or 1?   |        |       |
|    | 8*10*10*10*10*10=8000000 ways  | C402.4 | BTL 1 |
| 11 | 12.Find the number of distinguishable permutations of the letters "MISSISSIPPI"  |        |       |
|    | 11 letters with I repeated 4 times, S repeated 4 times, P repeated 2 times   |        |       |
|    | 11! = 39,916,800 = 34,650  |        |       |
|    | 4!*4!*2! 24*24*2   |        |       |
| 12 | Define Rook Polynomial.  |        |       |
|    | The rook polynomial RB(x) of a board B is the generating   |        |       |

|    | function for the numbers of arrangements of non-attacking rooks.<br>$\sum \infty k=0 \text{ rk } (B)xk$ =  | C402.4 | BTL 1 |
|----|--|--------|-------|
|    | where rk is the number of ways to place k non-attacking rooks on the board.<br>Despite the notation, this is a finite sum, since the board is finite so there is a maximum<br>number of non-attacking rooks it can hold; indeed, there cannot be more rooks than the<br>smaller of the number of rows and columns in the board |        |       |
|    | What is a Inclusion Map?   |        |       |
| 13 | Given a subset B of a set A the injection  | C402.4 | BTL 1 |
|    | f: $B \rightarrow A$ is defined by f(b)=b for all b belongs to B is called the inclusion map.  |        |       |
|    | From a group of 7 men and 6 women, five persons are to be selected to form a committee so that at least 3 men are there on the committee. In how many ways can   | 6402.4 |       |
| 14 | it be done?  | C402.4 | BTL 1 |
|    | We may have (3 men and 2 women) or (4 men and 1 woman) or (5 men only).  |        |       |
|    | Required number of ways = $(7C3 \times 6C2) + (7C4 \times 6C1) + (7C5) = 756$  |        |       |
| 15 | List all the derangements of the number 1, 2, 3, 4 and 5 where there first three<br>numbers are 1, 2 and 3 in some order.<br>When 1, 2 and 3 are in some order there are only  | C402.4 | BTL 1 |
|    | two derangements.  |        |       |
|    | 23154 and 31254.   |        |       |
|    | In how many ways can 8 papers in an examination be arranged so that the two  |        |       |
|    | Mathematics papers are not consecutive?  | C402.4 | BTL 1 |
| 16 | Since the two Mathematics papers are not to be consecutive, remove them for the time being. Arrange the remaining 6 papers. This can be done in $P(6,6) = 6!$ ways = 720 ways.   |        |       |
| 10 | In each of these arrangements of the 6 papers there are 7 gaps. In these gaps, the 2 Mathematics papers can be arranged in $P(7,2) = (7)(6) = 42$ ways.  |        |       |
|    | $\Box$ the total number of ways arranging all the 8 papers = 720 x 42 = 30240 ways.  |        |       |
|    | How many different license plates are possible if each plate contains a sequence of 3  |        |       |
| 17 | English alphabets followed by 3 digits? (Repetition is allowed)  | C402.4 |       |
| 17 | There ar 26 alphabets and 10 digits. $\Box$ there ar 26 choices for each alphabet and 10 choices for each digit. $\Box$ all 3 alphabets can be chosen in 26 x 26 x 26  | C402.4 | BTL 1 |
|    |  |        |       |

|    | = 263 ways, and the 3 numbers can be chosen in $10 \times 10 \times 10 = 103$ ways.   |        |       |
|----|---|--------|-------|
|    | $\Box$ total number of possible license plates = 263 x 103 = 17,576,000   |        |       |
|    |   |        |       |
|    | 7 students enter a restaurant where each of them has one of the following:  |        |       |
| 18 | a cheese burger, a chicken sandwich, a egg puff or a veg puff. How many different purchases are possible? (from restaurant point of view)                       | C402.4 | BTL 1 |
| 10 | n = 7, r = 4,   |        |       |
|    | no: of purchases = $(n+r-1)Cr = (7+4-1)C4 = 120$ .  |        |       |
|    | Out of 7 consonants and 4 vowels, how many words of 3 consonants and 2 vowels can be formed?  |        |       |
|    | Number of ways of selecting 3 consonants from $7=7C3$   | C402.4 | BTL 1 |
|    | Number of ways of selecting 2 vowels from $4 = 4C2$   |        |       |
| 19 | Number of ways of selecting 3 consonants from 7 and 2 vowels from $4 = 7C3 \times 4C2$  |        |       |
|    | = $(7 \times 6 \times 53 \times 2 \times 1) \times (4 \times 32 \times 1) = 210 = (7 \times 6 \times 53 \times 2 \times 1) \times (4 \times 32 \times 1) = 210$ |        |       |
|    | It means we can have 210 groups where each group contains total 5 letters (3 consonants and 2 vowels).  |        |       |
|    | Write the Binomial Theorem  | 6402.4 |       |
|    | n (m)   | C402.4 | BTL 1 |
| 20 | $(1+x)^n = \sum_{k=0}^n \binom{n}{k} x^k$   |        |       |
|    | $(1+x)^n = \overbrace{(1+x)}^1 \overbrace{(1+x)}^2 \cdots \overbrace{(1+x)}^n$  |        |       |
|    | In order to get $x^k$ , we have to choose x in k of $\{1, \ldots, n\}$ .  |        |       |

|    | There are $\binom{n}{k}$ ways of doing this.   |        |       |
|----|--|--------|-------|
| 21 | What is combinatorial number.<br>A combinatorial number is created by two positive integers' m and n written one on top of the other, within brackets:<br>$\binom{m}{n}$   | C402.4 | BTL 1 |
| 22 | Write The formula that allows us to find the value of a combinatorial number.<br>$\binom{m}{n} = \frac{m!}{n! \cdot (m-n)!}$   | C402.4 | BTL 1 |

| 8  | 9. Find the coefficient of 17 x in the expansion of $(1+x5+x7)20$   | C402.5 | BTL 1 |
|    | The only way to form an 17 x term is to gather two 5 x and one 7 x . Since there are $20C2 = 190$ ways to choose two 5 x from the 20 multiplicands and 18 ways to choose one 7 x from the remaining 18 multiplicands, the answer is $190*18=3420$ .   |        |       |
|    | Explain all the three Methods to Solving Recurrences?   |        |       |
| 9  | Iteration: Start with the recurrence and keep applying the recurrence equation until we get a pattern. The result is a guess at the closed form.  |        |       |
|    | Substitution: Guess the solution; prove it using induction. The result here is a proven closed form. It's often difficult to come up the guess so, in practice, iteration and substitution are used hand-in-hand. Master Theorem: Plugging into a formula that gives an approximate bound on the solution. The result here is only a bound on the closed form. It is not an exact solution. | C402.5 | BTL 1 |
| 10 | If we have a recurrence relation for a sequence, is it possible to express the sequence in a way that does not use recursion?   |        |       |
| 10 | Sometimes. When we are able to do so, we find what is called the closed form of the recurrence. It is an algebraic formula or a definition that tells us how to find the nth term without needing to know any of the preceding terms. The process of finding the closed form is called solving a recurrence.  | C402.5 | BTL 1 |
| 11 | Find a recurrence relation for the sequence 8, 24/7, 72/49, 216/343,  | C402.5 |       |
| 11 | Here a0=8 and each term is multiplied by $3/7$ so an= $(3/7)$ an-1 for n>1.   | 0702.5 | BTL 1 |

| 30 | Find the exponential generating function of the sequence0!,1!,2!,3!(APR/MAY2018)For a fixed n and fixed numbers of the letters, we already know how to do this. Forexample, if we have 3 as, 4 bs, and 2 cs, there are (9345) such permutations. Nowconsider the following function: $\sum_{i=0\infty}x_{2i+1}(2i+1)!\sum_{i=0\infty}x_{2i}(2i)!\sum_{i=0\infty}x_{ii}!.$ What is the coefficient of x9/9! in this product? One way to get an x9 term isx33!x44!x22!=9!3!4!2!x99!=(9345)x99!.That is, this one term counts the number of permutations in which there are 3 as, 4 bs, and 2 cs. The ultimate coefficient of x9/9! will be the sum of many such terms, counting the contributions of all possible choices of an odd number of as, an even | C402.5 | BTL 1 |

|    | number of <i>b</i> s, and any number of <i>c</i>  |        |       |
|----|---|--------|-------|
|    | s. Now we notice that $\sum_{i=0}^{\infty} x_i i! = e_x$  |        |       |
|    | , and that the other two sums are closely related to this. A little thought leads to<br>$e_{x+e-x}=\sum_{i=0}\infty x_{i}i!+\sum_{i=0}\infty (-x)_{i}i!=\sum_{i=0}\infty x_{i}i+(-x)_{i}i!$ .<br>Now $x_{i}+(-x)_{i}$ is $2x_{i}$ when $i$ is even, and 0 when $x$ is odd. Thus<br>$e_{x}+e_{-x}=\sum_{i=0}\infty 2x_{2i}(2i)!$ ,   |        |       |
|    | so that $\sum_{i=0}^{\infty} x_{2i}(2i)! = e_x + e_{-x}2.$  |        |       |
|    | A similar manipulation shows that<br>$\sum_{i=0}^{\infty} x_{2i+1}(2i+1)! = e_x - e_{-x}2.$   |        |       |
|    | Thus, the generating function we seek is<br>$e_x-e_{-x}2e_x+e_{-x}2e_x=14(e_x-e_{-x})(e_x+e_{-x})e_x=14(e_{3x}-e_{-x}).$  |        |       |
|    | Determine the coefficient of x <sup>15</sup> inf(X)=( X <sup>2</sup> +X <sup>3</sup> +X <sup>4</sup> +) <sup>4</sup> (APR/MAY2018)  |        |       |
| 31 | $(1+x+\dots+x5)8=(1-x61-x)8=(1-x6)8(1-x)-8$ Using the binomial theorem,<br>$(1-x6)8=\sum k \ge 0(-1)k(8k)x6k$ and using the negative binomial theorem,<br>$(1-x)-8=\sum k \ge 0(-1)k(-8k)xk=\sum k \ge 0(8+k-1k)xk$ Thus, when we convolve the above two generating functions, the x24 coefficient is<br>$(80)(8+24-124)-(81)(8+18-118)+(82)(8+12-112)-(83)(8+6-16)+(84)(8+0)-10)$ Addendum: If $a(x)=\sum n \ge 0anxn$ and $b(x)=\sum n \ge 0bnxn$ , then the x24 coefficient of<br>c(x)=a(x)b(x) is<br>$\sum k=024akbn-k$ The final answer I wrote then comes from setting $a(x)=(1-x6)8$ , $b(x)=(1-x)-8$ , and<br>realizing that $ak=0$ unless k is a multiple of 6, so the above can be rewritten<br>$\sum \ell=04a6\ell bn-6\ell$ | C402.5 | BTL 1 |
